The evolution of leks--clusters of small territories the place men congregate and reveal so that it will allure mates--is of significant factor in behavioral ecology, a result of insights it bargains into woman mate choice, sexual selection, and the evolution of mating systems. within the first e-book at the subject, Jacob Høglund and Rauno Alatalo draw jointly present wisdom on major facets of lekking. Why do leks evolve in a few species and never in others? Why do ladies of definite lekking species decide upon their buddies even if such habit reaps few or no fabric merits for them? In each one case they emphasize the significance of figuring out the selective forces that act on members in typical populations. Høglund and Alatalo synthesize the on hand details on lekking in all animal teams and recommend new parts of research. Originally released in 1995.
